

## Australia's only repellent physical termite barrier

Kordon Termite Barrier is a uniquely flexible building protection tool that provides a combined physical and chemical termite barrier – and can easily be moulded or cut and joined to fit complex design features.

Complete underslab installation of Kordon provides an impermeable moisture barrier for the entire building as well.

Developed in Australia, Kordon is backed by the global resources of Bayer Environmental Science – the world's largest environmental science business group and most innovative source of responsible pest and disease management solutions.

Over 15 years of assessment by Bayer, Kordon has achieved 100% success as a physical termite barrier. Kordon has also been tested and evaluated by the CSIRO, State Forestry Departments, State Building Authorities and experts in building design.

When correctly installed, Kordon is covered by a 10-year warranty. This manual shows all the different ways in which Kordon can be installed to ensure that the warranty is valid – and that Kordon can be expected to remain effective for over 50 years. In the next few pages you will also find a brief explanation of how Kordon works and contact details for accredited installers in all areas.
